

SCREEN GP Europe B.V. is exhibiting at “Hunkeler Innovationdays 2017” (Hall 2, 20th -23rd February, Messe Lucerne, Switzerland)

At this prestigious event, we will demonstrate our very latest models from the innovative Truepress Jet520 range of high-speed roll-fed inkjet presses, and introduce important new features and functionality.

These include:

- ▶ Our flagship Truepress Jet520HD press featuring new inkjet inks designed for printing onto standard offset coated paper. For the first time the press is integrated with a Hunkeler Roll-to-Stack solution with Dynacut function to show automatic cutting and stacking of variable sheet lengths.
- ▶ Our very latest Truepress Jet520NX model (debuted at drupa 2016) makes its commercial launch at this event. It will be integrated near-line to a Hunkeler Roll-to-Stack solution featuring the HL6 laser module and printing value-added transactional applications. This new press is equipped with newly developed 5-inch printhead module and supports a maximum resolution of 600 by 1,200 dpi plus advanced ink volume control. This press can be fitted with an extra printhead for a “fifth color” that enables the use of MICR black ink and other special inks.
- ▶ We introduce new front-end functionality to automate the production of complex, personalized direct mail and books where each item varies in page size and volume. We also partner with Horizon on their booth to demonstrate automation of binding books with variable page sizes and volumes.
