

# SCREEN Celebrates Milestone after Shipping 20,000 Units of Its PlateRite Series

SCREEN Graphic Solutions Co., Ltd. (SCREEN GA) has shipped a combined total of 20,000 units of its PlateRite series\* of computer to plate (CtP) recorders for printing systems, as of the end of September (including OEM partner models). The company is responsible for developing, manufacturing and distributing the PlateRite series.

## Outline

SCREEN GA originally launched its PlateRite1080 in 1995. In contrast to the then mainstream process of outputting data onto film and then transferring it to plates, the system was able to print data directly onto the plates. The new filmless approach significantly streamlined prepress and reduced environmental impact while also promoting digitalization of the overall printing process.

Following its release, the PlateRite series quickly gained the market's trust thanks to its combination of superior output quality, high stability and reliable support system, all backed by the SCREEN Group's core image processing technologies. SCREEN GA has also developed various ranges to meet specific customer needs and been a leader in adopting often pioneering technologies. This has seen it expand the lineup with various energy saving models that continue to deliver the same well known quality and productivity.

As a result of these various efforts, 28 years after its initial release, the PlateRite series has reached a major milestone. Including OEM partner models, SCREEN GA has now shipped a grand total of 20,000 units of the series.

Going forward, SCREEN GA intends to continue its work as a leading manufacturer of CtP systems by promoting the automation of production lines and developing further solutions to address specific customer issues. It expects these initiatives to lead to the creation of products that meet diverse market needs. At the same time, the company plans to accelerate its efforts targeting the development of a sustainable society, also allowing it to contribute to the long-term growth of the printing industry.

**PlateRite 1080**  
SCREEN's first CtP system

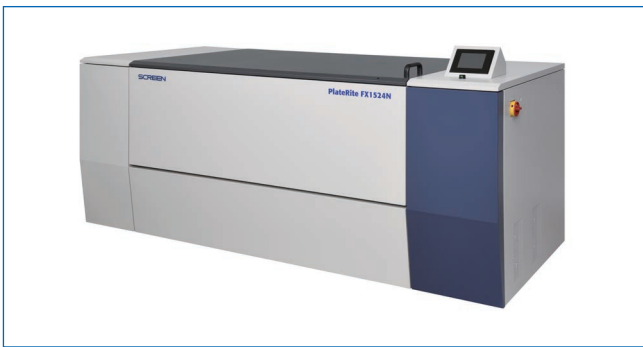

**PlateRite Ultima 24000N**  
Very large format CtP system

\* All CtP systems developed and manufactured by SCREEN

**PlateRite HD 8900N**  
**Flagship 8-page CtP system**

**PlateRite FX1524N**  
**Flexo and letterpress CtP system**
