The Semiconductor of the Year is an annual event founded 29 years ago, where products and technologies are selected for an award by the newspaper's journalists based on their social impact and future potential.

“ZI-3600” is a wafer inspection system instrumental to the stable production of next-generation power devices. It contributes toward achieving a carbon neutral environment that aims to reach zero greenhouse gas emissions. The capability of providing high-resolution inspection while being highly productive received acclaim and was selected for the “Excellent Award.”

SCREEN is grateful and honored by the recognition awarded to us. We will continue our research and development efforts to make semiconductor devices more energy efficient and contribute to the further advancement of the semiconductor industry.
